

Sweep-All PRG1048

Commercial Power Rake

“Built Tough. Easy to Use. Professional Results.”

Heavy-Duty Transport Tires

Commercial-grade support tires ensure smooth operation, stable transport, and consistent depth control.

Height Adjustment Switch

Quickly adjust operating height to match turf conditions and thatch severity.

PTO-Driven Power Rake

Heavy-duty PTO-driven power rake engineered specifically for Grasshopper commercial mowers.

108 Steel Tines

High-strength steel tines deliver aggressive, consistent thatch removal.

**Product not exactly as shown*

46" Raking Width

Wide working width increases productivity on large turf areas.

Benefits of Thatching

Improves water absorption

Removes the thatch layer that can act like a sponge/roof, helping water reach the soil and roots instead of running off.

Boosts nutrient uptake

Fertilizer and soil amendments can actually get down to the root zone rather than getting stuck in the thatch.

Increases oxygen to roots

Opens up the surface so air exchange improves, supporting healthier root growth.

Creates a better seedbed for overseeding

Exposes soil and improves seed-to-soil contact, which typically increases germination and establishment.

Reduces disease and pest pressure

Thatch can hold moisture and create a cozy habitat for fungi and insects; thinning it out helps the lawn dry and breathe.

Encourages deeper, stronger roots

With less surface barrier and better moisture/air movement, turf is more likely to root down rather than stay shallow.
